Fonds Description

Inter-Institutional Policy Simulator Project fonds. – 1969-1976.

4.18 m of textual records.

Administrative History

Established in 1970, the Inter-Institutional Policy Simulator represented a joint project by four levels of government and the University of British Columbia to construct computer interactive models of the Vancouver urban region. The project, housed at UBC in the Resource Science Centre, was designed to assess the impact of potential changes in a simulated environment. Initially intended to continue for five years, funding problems and internal disagreements amongst the participants, put the project behind schedule and the Federal Ministry of State withdrew its support in 1974. Although the model was never employed as envisioned, the remaining partners agreed to complete the documentation of the user and programming manuals for each model and system.

Scope and Content

The fonds consists of alphabetically arranged subject files from the IIPS Office during its run as well as numerically arranged working papers and technical reports. Other material includes reports and publications growing out of the project. The IIPS project was overseen and guided by a core group of stakeholder and interested members and a research group. Minutes, correspondence, and research by these groups are represented in the fonds. The project's simulation was composed of many sub-models coded and theorized by many committees. These committees and their respective sub-models generated various reports, research materials, minutes and correspondence over the span of the project.

Notes

Title based on the contents of the fonds.

Acquired by the University Archives in 1976.

File list available.

Series Descriptions

IIPS Administration Series - 1969-1976.

2.64m of textual records.

The series consists of records related to the administration, management, finances and organization of the IIPS project. Materials consist of correspondence, budgets, correspondence with partner and potential partner organization, committee and core group minutes, and research materials for the various committees and teams.

Working Papers Series – 1970-1974.

42cm of textual records.

The series consists of the working papers of IIPS and IIPS project members. Paper topics include simulation modelling, ecology, insights derived from the IIPS Research, and the like.

Year End Reports Series – 1971-1976.

19cm of textual records.

The series contains the year end reports from the five years of the IIPS project as well as the final report. It also includes some correspondence related to the production of the reports.

Technical Reports Series – 1971-1974.

48cm of textual records.

The series consists of technical reports related to the workings and issues of the various IIPS sub-models, programs, theories and operations. Reports vary in length, topic, and level of sophistication. This series is where how IIPS was to work and is theorized are documented.

Internal and External Reviews Series - 1972-1974.

29cm of textual records.

The series contains materials related the various internal reviews IIPS conducted as well as the major external review towards the end of the project. Both the review documents themselves and reports to the review committees are represented. Reviews contain feedback, discussion, and summary.

IIPS Promotions and Outreach Series - 1971-1974.

16cm of textual records.

The series includes materials generated through outreach by and promotion of the IIPS project. It contains brochures, workshop outlines, slideshow notes, and plans of demonstrations to various organizations.
